Abstract

Over the years, different terms were developed such as multimodal transport, combined transport and co-modality. These terms refer to integration between different modes of transport. The target is to achieve a more efficient use of the transport system. In the transport sector, railways are recognised as an environmentally friendly transport mode with a significant potential for sustainable development. Hence, the railway industry is facing potential growth. Setting a sustainable strategy and identifying how a sustainable rail Programme can be developed are the main purposes in this paper.
