

COLLEGE OF ENGINEERING & TECHNOLOGY

Department : Electrical & computer Control Engineering

Lecturer : Prof. Dr. Medhat El Singaby

Course : Electrical measurements & instrumentations (1)

Course Code : EE 211

Marks : 40

Date : 28/5/2015

Time : 2 hours

Final Exam

Answer the following questions:

Question no.1

A-1

- a) Calculate the absolute and percentage errors in μ if

$$\mu = \pi r^2 (p_1 - p_2) / (8QL)$$

Given that: $r = (0.5 \pm 0.01)$ mm ; $p_1 = (200 \pm 3)$ k pa, $p_2 = (150 \pm 2)$ k pa
 $Q = 4 * 10^{-7}$ m³/s and $L = 1$ m

- b) the resistance of a moving coil voltmeter is 12000 Ohms,
The moving coil has 100 Turns and is 4 cm long and a 3 cm wide. The flux density in the air gap is $6 * 10^{-3}$ T.
Find the deflection produced by 300 V in radians if the spring control gives a deflection of 1 degree for a torque of $25 * 10^{-7}$ N.M.

(10 marks)

Question no.2

B-2

- a) For a moving iron instrument with a spring control, Prove that

$$C \Theta = 0.5 I^2 dL/d\Theta$$

- b) The Law of deflection of a moving iron ammeter is given by $I = 4\Theta^n$, where Θ is the deflection in radians and n is a constant. The self inductance at zero deflection is 10 mH , and the controlling constant is 0.16 Nm / rad.
- (i) Find an expression for self inductance of the meter as a function of Θ and n .
- (ii) Calculate the meter current by $n = 0.75$, and the deflection corresponding to self inductance 60 mH.
