On the Performance of Few-Mode EDFAs with Bidirectional Pumping

In this paper, we examine a few-mode EDFA using unequal pump power with pump wavelengths 980 nm and 1480 nm for forward and backward pumping, respectively. A gain greater than 20 dB is achieved with low noise figure (NF) over the C-band. Moreover, we study the bidirectional pumping FM-EDFA in case of equal pumping wavelength at 980 nm and different pump powers.
