The Study of Establishing Grains Logistics Center in Egypt

Grains Logistics Centers are places where value added activities are accomplished such as packaging, storing and assembly. They also act as distribution center and imply the role of dry port. It is required to develop ports through establishing logistics centers. Hence, this research has sought out to examine the influence of logistics centers in ports, assessing the international experiments in establishing logistics centers in ports, prioritization for Selection of the most suitable port in Egypt to firstly establish logistics centers for grains in it. This conclusion is based quantitative and qualitative methods to examine different locations in Egypt, seaports, to find the best location for establishing grain logistics center The research concluded that Damietta port is the most convenient port to begin with establishing logistics centers for grains in Egypt.
