

Abstract

Rasha Abdel Aziz Youssef Shalaby

'Students' perception towards Mobile Moodle provision and usage in Egypt: The Case of the Arab Academy for Science and Technology', IADIS International Conference, Mobile Learning, Avila, Spain.

Moodle is an open-source web based Course Management System that allows the classroom to extend onto the web. It is free to install and is very adaptable to the needs of teachers and learners. Mobile Moodle is a minimalist Moodle interface so that people can access their academic information from anywhere. The main subject of the research study is the students' perception towards Mobile Moodle provision and usage at the Arab Academy for Science and Technology, as a case university that offers e-learning using the Moodle in Egypt. Egypt was ed as a good representative of mobile usage in the Middle East, with a population around 75 million, and a total number of mobile subscribers over 55 million. The study uses a questionnaire to investigate: 'How do students perceive Mobile Moodle provision and use in Egypt?' Data was collected at the Arab Academy for Science and Technology and analyzed using SPSS. Significant results were obtained.
