'Students' perception towards e-learning adoption in Higher education: The Case of Egypt'

The large number of students per class in higher education in Egypt has called for e-learning as it can serve a great number of students regardless of the class capacity. Review of Literature shows that adopting e-learning in a country with a population of 80 million like Egypt, needs clear understanding of cultural aspects & characteristics of the Egyptian students. This paper will focus on the Egyptian students as the main stakeholder in the e-learning process. It will try to identify the students' perception regarding e-learning & their e-readiness to its adoption by answering the following question: ?What is the Egyptian students' perception & e-readiness regarding e-learning adoption in Egypt? A structured questionnaire was designed & administered to target higher education students both in Alexandria & Cairo as the two main cities in Egypt. Data collected was statistically analyzed using SPSS & some mathematical formulas. Some interesting findings were discovered.
