How does Knowledge Management drive competitiveness in Egyptian Software Companies?

Purpose: Investigate the relationship between knowledge management, organizational innovativeness and organization competitiveness in an Egyptian context. Design/methodology: Data collected from 94 Egyptian software companies. Questionnaires were used. Data were analyzed using correlation analysis and structure equation modeling. Findings: Organizational innovativeness is a perfect mediator between knowledge management and sustainable competitive advantage. Research limitation: Using cross-sectional data. The sample is relatively small and overrepresented by small and medium-sized organizations. The study is conducted in a specific context which is the Egyptian software industry. Originality/value: Investigate the Resource Based View of knowledge management in the Egyptian software industry as a new concept. The paper provides an empirical explanation of the mechanism through which the knowledge management affects organization competitiveness. Practical implication: The paper provides managers with support of the importance of knowledge management for organization competitiveness. The paper also talked about the concept of innovativeness as multidimensional, this view provides managers with insight about many sources of innovativeness other than the technical innovation that prevail the extant literature. Key words: Knowledge Management, innovativeness, sustainable competitive advantage, process capability, Software, mediation, Egypt. Paper type: Research paper.
