Education and Training Interactive Self Study Conceptual Framework (Case study: Maritime Education and Training in Egypt)

The education industry deals with a large amount of data this data could be related to the student's marks, behavior and dealing with the whole history of the student, also this data includes syllabuses, and other educational aids, and at the end you need few reports and statistics through which the decision maker can monitor the whole process and consequently can take the right decision so he can keep the whole process on the right track, that can't be applied properly with the traditional ways, so we have to implement a new management system that can deal with these data stream and also can analyze it at the end of the day. This paper is looking forward to create a paperless educational enterprise
